Simulation applications to clinical trial design

Ken Cheung, PhD
Associate Professor
Department of Biostatistics
Columbia University

Learning Objectives:

- Describe emerging methods to use simulation to aid efficient trial design, using adaptive trial design as an example
- Discuss the basic elements in simulating an adaptive trial design, and discuss software for implementation

Tuesday April 23, 2013
4pm – 6:50pm
Irving Institute Educational Center Classroom (PH10-405B)
622 West 168th Street, Floor 10, Room 405B, NYC 10032

RSVP required to attend Jorge Luna (jl2708@mail.cumc.columbia.edu)

Required readings for attendees:

- Normolle D and Lawrence T: Designing dose escalation trials with late onset toxicities using the time to event continual reassessment method. JCO 2006; 24, 4426-4433.
